

We focus on your final plastic product!
Our capabilities:

- Article development
- Article sampling
- Article optimization
- Article performance test
- Material investigations incl. PCR, PIR
- Material trials
- Support for right material choice
- Process development for highest article quality
- Simulation studies
- Development tasks

Where the focus on product quality begins

Your challenge is our mission!

The combination of the right scientific understanding of plastics, as well as the simulative design and investigation of the digital twin, are our approach to ensure that we get your product – first time right.

The rheology of plastics is the foundation of simulation-based design and article analysis. Combined with smart prototyping, we have the ability to quickly arrive at the final article design – time to market.

BE  **WITH CUSTOMERS AND PARTNERS**

Our capabilities set new standards in the development of new, value-added products!

These possibilities set completely new standards when it comes to product development of new value-added products!
