Train Smarter with the Kautex Virtual Machine.

A safe, digital Training Environment that builds real Skills without Production Stops, Material Waste, or Risk.

Airline pilots use simulators — now your machine operators can too. The Kautex virtual blow molding machine delivers hands-on training in a completely safe, digital environment — without material consumption, production stops, or ris. Designed for new hires, product training, and emergency handling, the virtual machine replicates real-world processes using the original Kautex control software. It builds operator confidence long before the physical machine is even powered up. Unique in the blow molding world
The virtual Kautex machine is a hands-on training system that realistically simulates production processes — with the original machine control panel, real control software, and a fully digital twin. It's designed for safe, efficient, and effective learning in extrusion blow molding.

TRAIN ON REAL SYSTEMS
Realistic simulation with original controls. Our training units use the authentic Kautex control system, ensuring that every exercise reflects real-world machine operation and production processes.

SAFE AND COST-EFFICIENT
No material use, no risk. Practice without consuming raw materials or risking equipment damage — a sustainable and risk-free way to build operator skills.

FLEXIBLE LEARNING OPTIONS
Remote sessions or self-paced practice. Whether in guided online training or independent practice, the simulator enables continuous learning anytime, anywhere.

EASY TO SET UP
Plug & Play for instant use. The training unit connects to a standard 230V outlet and is ready to run. Compact and user-friendly, it's also available as a physical unit for hands-on learning.

Common use cases
Train without fear of mistakes. There's no risk to real machines, products, or output. Whether onboarding staff, changing products, or preparing for emergencies — training is done independently of live production. Training new operators before commissioning, Preparing for product or process changes, Emergency scenario simulation Internal training programs, Audit or certification readiness

Who is it for?
The system is compact and modular. It includes a simulation PC, two monitors (plus optional projector), the original Kautex control panel, and the full digital model of a blow molding machine. Technical support teams, Quality assurance, In-house education units, Production supervisors

Virtual Training Safe. Smart. Scalable.
Our virtual Kautex machine simulates the real production process without any risk of damage or downtime. Errors are part of the learning experience – not of your cost sheet. The platform can be used on-site or remotely, and is even available for purchase.

Key benefits:
- No material usage
- No damage risk
- Everyone can train safely
- Training room or remote setup
- Available for continuous in-house use

Contact us today and experience how the
Virtual Trainer can transform your operator training.
